unchanged from an earlier era. The prevailing quality of Haitian rural and craft industry, then, is one of great stability and conservatism.

At the same time, of course, major events since the revolution have left their imprint on this part of life. Hardly a roadside village in Haiti today, for instance, lacks an automobile mechanic, even though these men are mostly self-educated and work with hardly any tools. Their skills became part of Haitian culture in this century and are often of a simple order no longer typical of more developed areas. Tire tubes, for instance, are "vulcanized" by the use of an ingenious device made from a board and an old piston, kerosene providing the heat to make the seal; this technique, along with the sewing of damaged truck tires, was almost certainly introduced and diffused by the United States Marines.

But these quaint additions do not alter the fact that shop and factory industry are nearly absent, and extractive industry virtually nonexistent. Haiti's one alumina extraction enterprise, foreign-owned, is now shut down. There is but one flour mill, and that is foreign-owned as well. One or two textile mills and sugar factories, established with foreign capital, still function, as do a modern cement factory and a few other small plants established in the 1950s. These industries, scanty as they are, were of great importance to Haiti, since they represented substantial investments, held out the promise of reduced dependence on imports in significant categories, and contributed to the beginnings of an industrial proletariat. However, they involved only a tiny fraction of the national labor force, and they have not proved entirely successful. As a result, Haiti lacks any reserve of labor acquainted with modern industry, even though many people, both urban and rural, work at tasks that might be considered more industrial than agricultural.

Most important for the present discussion, the minor developments in Haitian industry have not led to an expanded market and have not resulted in any firm increase in productivity. Industrial growth, in the sense in which it has occurred in countries such as those of Western Europe—or for that matter in Mexico or Argentina—is entirely lacking. The absence of such growth is perhaps especially significant if Haiti be compared with a neighbor such as Jamaica or Puerto Rico. These countries, one now independent, the other a North American dependency—have both gained real increments from the investment activities of outsiders;
